

Liquid Fence® Mole Repellent

Short Description:

99% Reduction in mole activity, even 4 weeks after treatment!

It's long lasting! In independent lab testing, Snell Scientifics, LLC found Liquid Fence Mole Repellent Ready-to-spray provided excellent overall results, with an astonishing 99% reduction in mole activity, even 4 weeks after treatment.

Long Description:

Simply spray Liquid Fence® Mole Repellent on your lawn or landscaped garden areas. You will quickly see results after one or two applications. The ingredients in our eco-friendly mole repellent ensure an extended period of effectiveness and deep-root penetration, making it the smart choice for your lawn or garden.

Non-gelling means non-clogging

The Liquid Fence Company's eco-friendly mole repellent will keep your hose-end type sprayer clog-free at temperatures as low as 33° Fahrenheit -- much lower than some other mole repellents that will gel and clog at average well water temperature! One more reason Liquid Fence Mole Repellent is the best mole repellent on the market today.

How it works: Our repellent is formulated to coat earthworms and grubs, the main sources of food for moles. This creates a very undesirable meal, forcing these destructive nuisances to look elsewhere for food.

Member tested and recommended by the National Home Gardening Club! America's largest club of garden enthusiasts tested and awarded Liquid Fence Mole Repellent Ready-to-spray with the club's prestigious seal of approval.

How to use: Apply Liquid Fence Mole Repellent liberally to lawns or landscaped garden areas.

Bullets:
