The Liquid Fence® Company **FROST PROTECTION**

FREEZEPRUF™

It's like moving your temperature zone 200 miles south!

Great for all plants including fruit and vegetable plants

Improves healthy plants' natural cold tolerance by approximately 2° to 9°F, depending the variety of plant

Protects foliage and flower from ice crystal damage

Biodegradable and Eco-safe

Easy-to-use

Protection lasts 4 to 6 weeks

100% Money-back Guarantee

A scientific-breakthrough - FreezePruf is a foliar / floral spray that increases plant resistance to both cold damage and cold mortality. Application of FreezePruf to healthy foliage or flowers of both monocot and dicot plants immediately increases resistance to cold injury and cold mortality by 2.2° to 9.4° Fahrenheit (1.2° to 5.2° Celsius), depending on plant variety and the duration / intensity of frost or freeze event.

Developed by botanists at The University of Alabama and Miami University (Ohio), FreezePruf protects the plant externally and systemically by enhancing its natural "anti-freeze" like properties and reducing ice crystal damage. It also adds extra frost / freeze protection capacity to a plant's normal capabilities without replacing or diminishing the plant's native capacity. It's as though FreezePruf moves the planting location 200 miles south, the equivalent of about one half of a USDA zone.

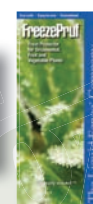

Active Ingredients: Polyethylene glycol 8000; Glycerin
Other Ingredients: Water; Bicyclic Oxazolidines; Silicic acid, potassium salt; Silicone Polyether Copolymer
